cont

- 1 16 32 (amended) A portable cot apparatus comprising:
2 a. a rectangular frame including a first rail section that is configured to be
3 detachably coupled to a second and a third rail section, wherein the second and
4 the third rail sections are configured to be detachably coupled to a fourth rail
5 section; and
6 b. a rectangular support configured to be detachably coupled to each of the first,
7 second, third and fourth rail sections, the rectangular support including a first
8 sleeve along a first edge for detachably coupling to the first rail section, a second
9 sleeve along a second edge for detachably coupling to the second rail section, a
10 third sleeve along a third edge for detachably coupling to the third rail section and
11 a detachable fastener along a fourth edge for detachably coupling to the fourth rail
12 section the detachable fastener comprises a two part fastener attached to the
13 flexible support, wherein the rectangular support is secured to the fourth rail
14 structure by wrapping a portion of the detachable fastener around the fourth rail
15 section and securing the two part fastener to form a detachable sleeve and,
16 wherein, the rectangular support is removed from the rectangular frame by detaching the
17 first rail section from the second and third rail sections, unfastening the detachable
18 fastener from the fourth rail section and sliding the second and third sleeves off of the
19 second and third rail sections.
- B2

- 1 40. (amended) The portable cot apparatus of claim 39, wherein the first rail section is
2 configured to be detachably coupled to the second and the third rail section through
3 corner connectors and wherein the second and the third rail sections are configured to be
4 detachably coupled to the fourth rail section through corner connectors, wherein each of
5 the corner connectors have [further comprising a plurality of detachable corner
6 connectors with] horizontal holes for receiving ends of the each rail section.
